Source: Olist public e-commerce dataset & Power BI dashboard analysis

Where Olist can grow, and what is holding it back

Findings and recommendations from 99K marketplace orders, Jan 2017 – Aug 2018

olist E-Commerce Strategy

Three questions behind the analysis

1. Demand

Where does revenue come from?

Sales by state and product category.

2. Experience

Does delivery shape satisfaction?

Delivery time, on-time rate and review score.

3. Fulfillment

Where do orders leak?

Order status outside delivered.

Scope: Brazilian marketplace orders, Jan 2017 – Aug 2018 (2018 is a partial year). Built in Power BI with Power Query and DAX.

olist Snapshot

2.

A healthy marketplace with one clear weak spot

13.59M
Total Sales

99K
Orders

136.68
Average Order Value

93.2%
On Time Delivery

4.09
Average Review Score

12.5 Days
Average delivery takes

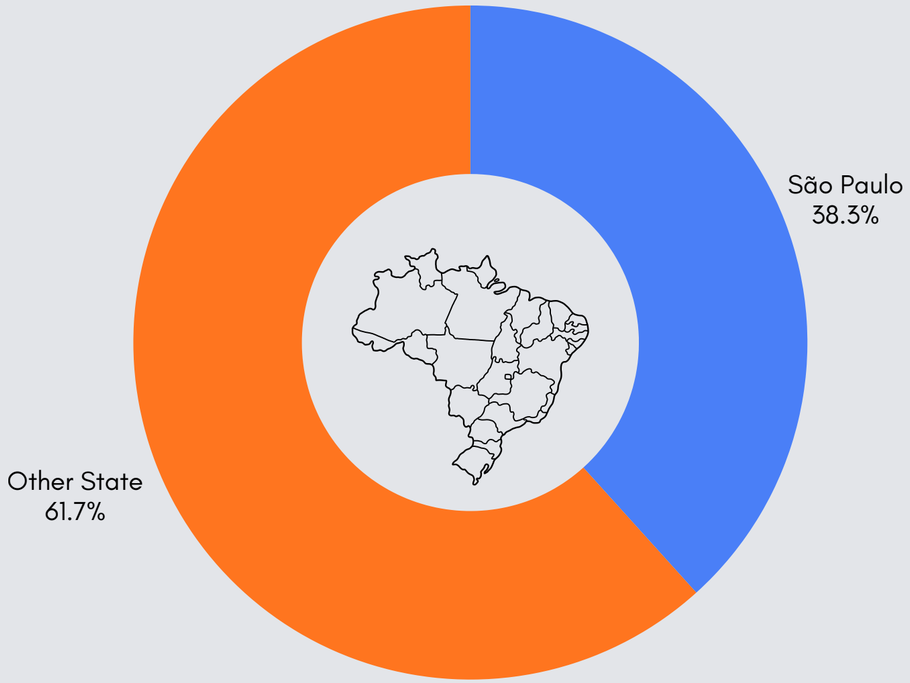

Revenue is led by

- Health & Beauty
- Gift Watches
- Bed & Bath

olist Demand

3.

One state drives more than a third of revenue

São Paulo (SP) is far ahead of every other state. The next largest are

- **Rio de Janeiro**
- **Minas Gerais**
- **Rio Grande do Sul**
- **Paraná**
- **Santa Catarina**

Revenue Concentration

Growth is concentrated in the south-east, so any shock there (logistics, competition) hits the whole business.

Late delivery cuts the review score by two points

4.3

Average review, delivered on time

-2.0 PTS

2.3

Average review, delivered late

93.2%

of orders arrive by the estimated date, so late orders are a minority.

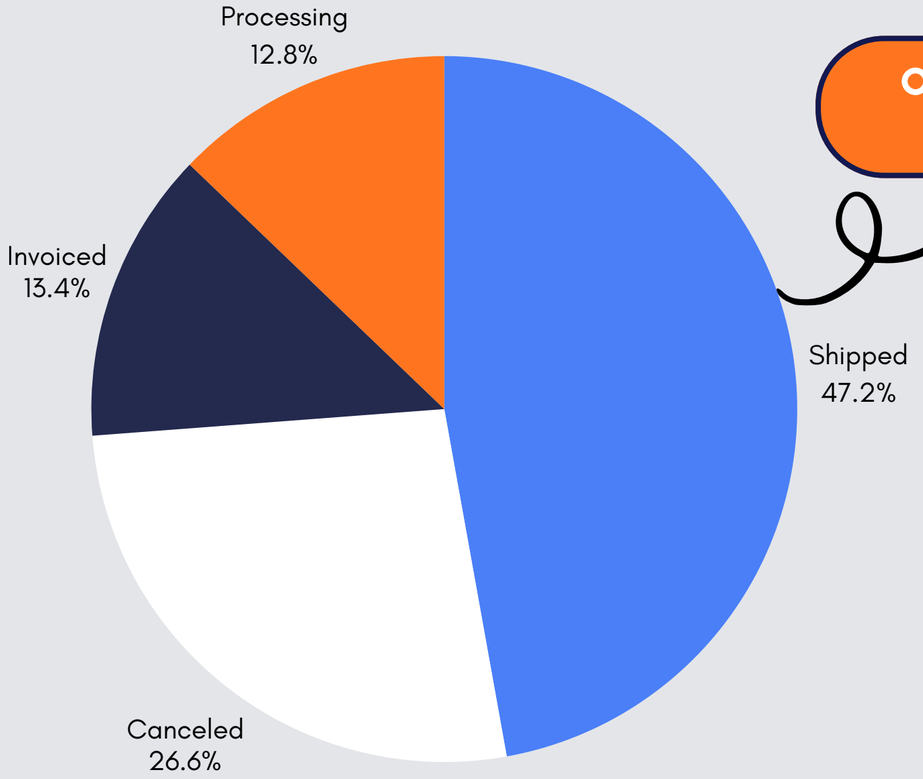

12.5 days

Average Delivery Time

Late means delivered after the estimated delivery date. The link is a correlation, not proof that lateness alone causes low scores.

olist Fulfillment

97% of orders are delivered; the rest are small but visible

Order status (not delivered)

Canceled + unavailable

~1.2K Orders ~1.2% of all orders

Most non-delivered orders are still in progress. Canceled and unavailable orders may represent preventable loss.

~3K

orders are not delivered. Most are still in progress

olist Recommendations

6.

Three moves, in priority order

1. Fix Late Delivery

Protect the review score

Review carrier performance and the accuracy of estimated dates in the slowest regions.

Evidence: late orders score 2.3 vs 4.3 on time.

2. Diversify Demand

Grow beyond São Paulo

Pilot targeted acquisition in RJ, MG, RS, PR and SC, and judge each by order value before scaling.

Evidence: SP is 38.3% of revenue.

3. Cut Avoidable Loss

Reduce Cancellations

Improve stock accuracy and flag sellers with repeated canceled or unavailable orders.

Evidence: about 1.2K orders, 1.2% of total.

What this analysis does not show yet

- **Limitations**

2018 data ends in August, so year-on-year comparisons are partial.

No cost or margin data, so revenue is not profit.

Delivery and review score are correlated; causation is untested

- **Next Step**

Seller concentration: top 10 sellers and a Pareto view.

Payment mix and repeat-customer rate.

•Excel scenario: on-time rate from 93% to 97%, and the effect on reviews.
